Detailed Description

Detailed Description

... the invention is arranged to intercept a request for information from
the at least one **user** terminal and in **response** retrieving and sending
the advertising or other promotional materials to the requesting user
terminal(s)...

...5 locality, user usage pattern and user demographic.

Desirably the invention includes a database of **user profiles** and a
database of **advertising** or other promotional materials for different
user profiles, and is arranged to retrieve the advertising or other
promotional materials substantially matching the **profile** of the
requesting **user** terminal(s).

3 0 The **user profiles** may be obtained in any suitable manner. It is
however preferred that the **user profiles** are classified according to
pervious requests for information and usage patterns. The appl icant's

co-pending patent application filed on even date describes such a **user profile** classification system.

Typically said another source is a relay station for providing communications links between the at least one...

Abstract (Basic): WO 200321479 A2

NOVELTY - The experimental media service creation method initially creates a rulebase that monitors a test groups reaction to information stimuli . Once done, **databases** that contain information about **user profiles** and theoretical parameters. A database is then created from the interactions from the two other databases, that matches the **user profiles** to the **reaction** information provided by the rulebases. The method then creates metadata file based on these results, and provides this for the method user.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for an information generation system.

USE - For providing personalized information services for specific **users** , based on **user reaction** .

ADVANTAGE - The method provides a more effective way of targeting information to specific users.

DESCRIPTION OF DRAWING(S) - The figure shown is a block diagram of an information system.

Abstract (Basic): WO 200317134 A2

NOVELTY - Method consists in creating a rulebase including the reaction impulses of a test user group to the information stimuli presented, and creating three **databases** describing the information **content** space, **user profile** space and **reaction** space, all including theoretical alternatives for the respective parameters. The parameters are compared with theoretical values and metadata files are created for the users and content. The rulebase is created by presenting information objects to a statistically significantly larger test user group, collecting data on the test group reactions and storing their reaction impulses by linking all the parameters.

DETAILED DESCRIPTION - There is an INDEPENDENT CLAIM for a media service information system.

USE - Method is for user-specific personalisation of information services used via information networks such as the Internet.

ADVANTAGE - Method enables systematic modelling of **individual user** psychological **reactions** to the information presented to improve user satisfaction with it.

DESCRIPTION OF DRAWING(S) - The figure shows an information system.

Abstract (Basic): US 20010023405 A1

NOVELTY - The agent's feeling for the proposal item presented by a
computer, is generated by using an agent's self-confident degree
attribute which is calculated in accord with the user's taste.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
following:

- (a) Feeling generator;
- (b) Item proposing method;
- (c) Computer program for accompanying user feeling information
proposal item;
- (d) Computer readable medium storing agent's feeling data
corresponding to proposal item;
- (e) Method for reacting to user's response for proposal
sentence;
- (f) Computer program for item proposing;
- (g) Computer program for reacting to user's response

USE - In information retrieval apparatus or information
presentation apparatus to make reaction and information proposal of
computer accompany feelings in conversation between user and computer
regarding proposal contents such as music data, stores, hotels,
schedule data, etc.

ADVANTAGE - The proposal is carried out with fully self-confident
feeling. The reaction sentences with the feelings are used in several
applications for presenting various data.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
feeling generator.

Abstract (Basic): WO 200132279 A1

NOVELTY - The **user profiles** of multiple **user 's** of a game system are stored by a network gaming system and allows one of the users to log onto the system. The **advertisement** of sponsored that relates to prize won by user in game, is displayed while the system is being used. On receiving the **user 's response**, the **user profile** is sent to the advertiser.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for advertising feedback providing program.

USE - For reporting interest in sponsor advertise using gaming system connected in networks such as internet.

ADVANTAGE - System enables the provider of network system to focus advertising towards particular **users** and report their **responses** to particular **advertisements**. The sponsors' **advertisements** to particular user market segments are effectively determined. Timed display of **advertisements** optimize the effectiveness of **advertisements** towards the users.

DESCRIPTION OF DRAWING(S) - The figure shows the general functional diagram of prize redemption system.

Abstract (Basic): WO 200154480 A2

NOVELTY - Computer activity of the unknown **user** is recorded in **response** to the information provided to the user by a digital processor. The recorded computer activity of the user is combined with a computer demographic score of the digital processor to generate the demographic **profile** of the **user**.

DETAILED DESCRIPTION - The computer demographic score is based on demographic information obtained from known users. An INDEPENDENT CLAIM is also included for computer program for providing **user** demographic **profile**.

USE - For collecting demographic **profile** of **user** to provide **advertisement** regarding suitable products or services, etc. The collected demographic profile can also be used for determining the success of a website for attracting **users** of selected **profile**.

ADVANTAGE - Generates accurate **user** **profile** information, without having to provide user identity information such as name, address, etc.

Abstract (Basic): WO 200127800 A2

NOVELTY - A user may obtain data from The Internet. Multiple displays are placed on a display screen with later displays being positioned having regard to existing displays. A server has sets which respond to requests for components of information and a locator locates the component displays in **response** to **user** input. Advertising can be targeted to **users** using a transmission **profile** which is constructed for each user to show the characteristics of the information requested and used by that **user**. The **profile** is used to select the **advertisement** display to deliver to that user.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for

- (a) a business method for marketing advertising on The Internet
- (b) a method for displaying advertising on The Internet
- (c) a method of targeting information delivery to a user of a network
- (d) a network
- (e) and a means for transferring a set of visual material over a network.

USE - Accessing The Internet.

ADVANTAGE - Customized and user friendly display of information and advertising.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
JP 10134080	A	9	G06F-017/30	

Abstract (Basic): JP 10134080 A

The system includes a pair of **user profile** registration unit that registers user's taste attribute and dislike attribute (1a,1b) respectively. A **user profile** memory (2) stores the registered **user profiles**. A pair of information transmission profile registration unit (3a,3b) registers the information and attribute classification index. An information transmission profile memory (4) stores the information transmission profiles. A searching unit (5) matches each attribute in attribute classification index with each attribute of the **user profile** which are stored in respective memory units.

A pair of read out units (6a,6b) reads out the contents in the information transmission profile which has attribute classification index matched by the searching unit either from the information transmission **profile** memory or **user profile** memory. A **user** is corresponded in response to **user profile** matched by the search unit and the information presentation unit (7a,7b) displays the read out information.

USE - In wireless communication and radio broadcasting.

ADVANTAGE - Facilitates information transmission within short time. Facilitates display of lot of information to many users and unspecified users.

Abstract (Basic): WO 9741673 A

The communications system has the users linked to a network, such as the Internet. When a user initially logs onto the system a unique identification is created, and the user is presented with agate information options. The **user responses** , both initially and in subsequent visits, are recorded and assembled (71). These responses are analysed psychographically to identify the **user preferences** , and

build a **profile** of the **user** (73).

A program controller receives several **advertisements** (75), and selects and customises these for presentation to selected users. The process is iterative in that **users' reactions** to the **advertisements** are recorded and used to refine the profile.

ADVANTAGE - Allows **advertisements** to be selected and customised to suit users based on their history of viewing habits.

Abstract (Basic): WO 9726729 A

The World Wide Web allows **advertisements** to be presented to users and also collection of information about users. The **advertisements** selected by users and the time they observe the material can be traced along with other information supplied by the user. The data can be analysed to identify communities of **user** that **respond** in similar manner to certain types of **advertisements**.

This knowledge can then be used with Smart Ad Boxes to show only adverts related to his or her particular consumer community. The data can also be collected within the user's own browser software so that selections are within the user control and do not breach privacy concerns.

USE/ADVANTAGE - Provides intelligent and selective presentation of advertising material by identifying **user's interests**. Can be combined with systems using age, gender, Internet domain etc.
